

THE AMY COIN

Intro

We use curated mood boards to define the visual identity of AMY, XPoll's signal intelligence coin designed to measure public perception of narrative influence, psychological pressure, and trust across media, political, and institutional environments.

These mood boards capture the emotional and cognitive dynamics of modern information ecosystems—uncertainty, awareness, skepticism, authority, and trust erosion—while translating those conditions into a disciplined, analytical visual language. They guide our design decisions to ensure AMY feels credible, neutral, and resilient, reflecting its role as a measurement instrument rather than an advocacy or opinion platform.

Together, these visual references shape a cohesive identity that reflects AMY's purpose: transforming lived experience of information environments into structured signal, longitudinal insight, and shared understanding within an increasingly complex and contested narrative landscape.
