

META4

INTRODUCTION

Meta4 is a conceptual credit coin designed for XPOLL, created to represent how perception, framing, and context shape modern signals. It exists not as a transactional object alone, but as a symbolic anchor for how information is interpreted in corporate governance, technology, and institutional decision-making.

META4

ABOUT THE COIN

The Meta4 coin is a lenticular artifact that reveals two identities depending on viewing angle—sheep and wolf—while the coin itself remains unchanged. Crafted visually as a wooden medallion with restrained gold accents, it balances organic materiality with institutional authority, reinforcing the idea that truth is stable, but interpretation is not.

COLOR & TEXTURES

The Meta4 color system is intentionally restrained. Natural wood tones represent grounded reality and time, while soft gold accents signal governance, value, and institutional weight. Black and deep charcoal backgrounds are used to isolate the object and maintain focus. No additional colors are introduced to preserve clarity and authority.
